**Key facts about the leak**

The Ministry of Health (MOH) revealed yesterday that confidential information of 14,200 people diagnosed with HIV was stolen and leaked online.

1. **What information was disclosed?**
   - The details included names, HIV test results, addresses, phone numbers and dates of birth for individuals who were notified by the Ministry of Health. The information was publicly disclosed on the internet by a site located in Singapore.

2. **Who is affected by the leak?**
   - All 14,200 people diagnosed with HIV in Singapore up to January 2013 were affected, including those who were not yet notified.

3. **Who leaked the information?**
   - The leak was linked to a former health worker named Ler Teck Siang. He is believed to have accessed the data to help his American ex-girlfriend, who he said was diagnosed with HIV. Ler was charged with a criminal breach of public trust and was one of the people notified.

4. **How did Ler Teck Siang get hold of the information?**
   - Ler Teck Siang, 36, worked as a sterile services worker for the National Health Group (NHG) and had access to information systems including the HIV Registry. He is alleged to have used his position to access the data.

5. **Where is Farrera-Brochez?**
   - Farrera-Brochez, 44, who was involved in the leak, remains registered as a doctor in the United States. He is believed to have been in Singapore to check on his daughter, who was born in Singapore.

6. **When did MOH find out that information from the HIV Registry had been leaked?**
   - In March 2018, MOH received a report that patients were being contacted by a person claiming to have confidential information about their HIV status. MOH then conducted an investigation and found that the data had been leaked online.

7. **What has MOH done to prevent further leaks?**
   - MOH has taken several steps to prevent further leaks, including increasing security measures on its computer systems and conducting audits of its staff to ensure that no further information is leaked.

8. **How has the leak affected those affected by the leak?**
   - The leak has caused emotional distress for those affected, including concerns about confidentiality and the potential for discrimination.

9. **What next?**
   - MOH is working with affected individuals to provide support and counseling, and is considering options for compensation.
